

## Environmentally Friendly

ProjectStone has made a lifelong commitment to protecting the environment. The entire Quartz production life cycle, in fact, demonstrates our commitment to environmental responsibility. The quartz we use is quarried within 500 miles of the manufacturing plant, to minimize transportation. We also make every effort to recycle and reuse quartz material, to optimize water usage through reclamation and filtration processes, and to minimize dust emissions in all phases of production.

All of our Quartz manufacturing facilities closely monitor energy usage and efficiency. ProjectStone utilizes ecological safe solvents and adhesives in the manufacturing process, and keeps emissions of solvent and adhesive vapors and residue to a minimum. ProjectStone has been awarded the prestigious Greenguard® certification for indoor air quality. Project Stone is committed to indoor air quality by meeting the standards of this rigorous third-party testing program for low-emitting materials and products. The Greenguard Certification Program is administered by Greenguard Environmental Institute (GEI), an industry-independent, non-profit organization whose mission is to improve public health and quality of life by helping manufacturers build better and safer products.

# QUARTZ

BY PROJECTSTONE

## 02.

Our Quartz surfaces are radon-free and made of 93% crushed quartz, combined with high-quality polyester resins and pigments. Using a unique process, the mixture is then compacted under intense vibration, vacuum and pressure to create dense, non-porous slabs. The slabs are post-cured, gauged to a precise thickness, and polished to an enduring shine. ProjectStone will further fabricate the slabs to your precise custom design specifications.

## About ProjectStone Quartz

**Sleek, modern and sophisticated, the ideal choice for today's countertop installations.**

It has the honed stone appearance preferred by today's designers. The cool, tactile "feel" of natural stone. And a look inspired by the smooth, matte-like texture of natural leather. Handsome, striking and contemporary, ProjectStone® Quartz is a natural, eco-friendly product that's the perfect option for bathroom vanities, kitchen countertops and a variety of other surfaces in hotels, apartments and condominiums. Stronger than granite, and longer lasting than other stones or laminates. Hygienic, non-toxic and non-allergenic, our Quartz is an ideal food preparation surface because it does not promote mold or microbes and resists stains like coffee, tea and wine.

**Easy to maintain, difficult to tarnish.**

Because of the hard, non-porous nature of the quartz material, Quartz surfaces require little to no maintenance to keep them looking like new. There's never any sealing required, and simple cleaning with soap and water or a mild detergent is all that's required to maintain the luster and striking good looks of the finish. When it comes to durability, you won't find a better option for vanities and countertops. Quartz is resistant to heat, stains, scratches and other mishaps that are bound to happen in kitchens and bathrooms.

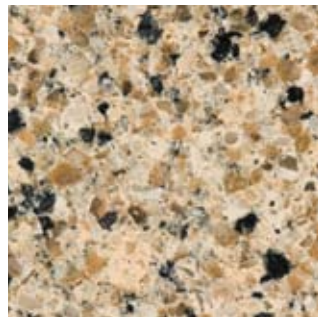

## *Versatility*

Cut to your specifications, Quartz offers a wealth of possibilities in its applications. Ideally suited for kitchen countertops and bathroom vanities, Quartz is also an excellent choice for tabletops, floors, and even shelving. On a vertical line, it's also perfect for backsplash designs, shower walls and other wall surfaces. This versatility is an inspiration to your creativity, offering an array of options for "reinventing" the look of a room. That's the beauty of ProjectStone Quartz.

## *Composition & Pattern*

Unlike the uneven color patterns commonly found in granite, ProjectStone Quartz has a more uniform granularity and color texture throughout, providing a sleeker, more "polished" appearance on the countertop, vanity or other surface. This makes it especially appealing to today's designers who prefer the clean, sleek and sophisticated look that Quartz lends to the room. The overall feel is lighter, airier and more open, in keeping with today's contemporary design trends.
